

# Mobile Feed Storage Bins

Specification extract · Pages 83–85

## What this document is

This is an extract of the Department of Agriculture, Food and the Marine (DAFM) document “ACRES Co-operation Non-Productive Investments Specification”, Version 2.2, July 2026. It contains the pages covering the Mobile Feed Storage Bins action (pages 83–85 of the full specification).

Because the specification runs each action straight into the next, the first and last pages of this extract may also show the end or beginning of a neighbouring action. The section for this action starts on page 83 (the printed page number matches the page number in the full document).

## Always check the current version

DAFM updates the specification from time to time. The full document is the authoritative version and should be consulted before undertaking any work. It is available from:

## About this action on the ACRES CP website

<https://acresireland.ie/action-projects/npi-mobile-feed-storage-bins/>

- Supplementary concentrate feeding should not be used to facilitate overstocking of habitats beyond their natural carrying capacity.
- Where supplementary feeding is practiced on a Winterage field, existing or old feed sites should be used where appropriate and done in line with the grazing needs of the field.
- Supplementary feeding on a Winterage should not result in overgrazing of the sward, or a prolonged grazing period that extends into the summer flowering months.

## Mobile Feed Storage Bins

### Objective

To encourage the use of mobile feed storage bins as a place to store concentrate feed on remote grazing parcels where supplementary feeding of livestock can have numerous benefits for the grazing management of habitats.

Secondary benefit is minimised feed availability to rodents in farmyards and thus lowering the need for chemical rodent control in and around farmyards which can have knock-on effects for wildlife.

### Background

The use of concentrate feed can be a beneficial practice as it helps provide the adequate nutrients to livestock which allows them to digest rougher vegetation present in many priority habitats. The use of concentrate feed equipment provides an incentive for the farmer to move away from outdoor silage or hay feeding. The feeding of silage and hay bales in ring feeders can be highly damaging to habitats and water courses.

### Site Suitability

- This action can only be selected on parcels with an Eligible hectare > 0.
- This action is available on CP parcels only.
- This action can only be selected on fields that have a scorecard submitted and is available on any scorecard. This action may not be appropriate on Peatland sites.
- Feed bins should not be placed on or within close proximity of a monument or result in new or additional tracking of a vehicle or livestock near or on a monument or archaeological feature. Ongoing monitoring will be required to ensure that archaeological monuments are not impacted upon.

### Requirements

1. All mobile feed bins must be purchased new.
2. Each feed bin applied for is only eligible for one NPI payment and once claimed must be retained for the remainder of the ACRES contract.
3. The minimum size specification for a mobile feed bin is 1 cubic metre.
4. Feed bins must be made of strong, durable PVC plastic or galvanised heavy-duty steel and fully weatherproof/ rodentproof.
5. Feed bins are mobile and can be stored on scored fields during the grazing period. They may be stored away from scored fields when not in use.
6. Only one claim for payment is allowed per approved NPI-Annual Works Plan. This action can only be claimed for payment once delivered in accordance with NPI Specification.

## Pasture Pumps

### Objectives

Provide a pasture pump that is capable of drawing water from a safe supply to grazing livestock.
